

ASSET STEM Education™

Public Education & Outreach for the MS4 Stormwater Management Program

INNOVATING
FOR THE FUTURE

ASSET STEM Education™ offers fun and engaging summer programs for students (grades 1-8) as well as informative workshops for adults to help your municipality meet MS4 Stormwater Management Program requirements!

Choose from the following options:

Environment & Ecology Explorations - Wetlands Grades 1-3

This fun and engaging offering explores the unique ecology and environments in Pennsylvania and provides hands-on, inquiry-based instruction. Students will gain an understanding of wetland ecosystems and their effects on the environment.

Don't Runoff: Engineering an Urban Landscape Grades 4-8

When it rains, it pours—and when water can't soak through pavement, rain collects pollution that washes into rivers, lakes and oceans. This offering teaches students to use environmental engineering skills to redesign a city and control stormwater runoff.

Stormwater Management Community Education Workshop Ages 18+

Residents will learn about stormwater runoff and how to reduce waterborne contaminants! Programs are offered in partnership with community members and local community resources.

About ASSET STEM Education™

ASSET STEM Education is a national Science, Technology, Engineering and Math (STEM) education improvement nonprofit established by Bayer Corporation and several community partners in 1994.

ASSET fosters STEM fluency and college/career-readiness by providing educators of students Pre-K through career with highly-effective professional development, hands-on educational materials and consulting services. Our programs align with national and state educational standards and are results-oriented, research-grounded and inquiry-based.

We equip educators with effective tools and strategies to create innovative and relevant learning environments so all students acquire the knowledge and skills needed to work, live and contribute in a global community.
